Data Collection

Collect the data or create the data

Data Preprocessing

Import the libraries

Importing the dataset

Analyses the data

Taking care of missing data

Feature Scaling

Data Visualisation

Splitting data in train and test

Creating a dataset with sliding windiw

Model Building

import model building libraries

Adding LSTM layer

initialising the model

adding output layer

Configurre learning proccess

Training model

Model evaluation

Save model

Application building

Create HTML file

Python code
